

Bridal Veil Falls

1st Oct 2000

①

Certainly the focal point of Pecos Canyon is BRIDAL VEIL FALLS, and indeed is just that. A bride's veil could not be more white, nor more flowing than that has been seen all the days of my life & probably for tens of ~~the~~ time - add story of Horse's Veils & Ugly Bride as mentioned before Cascade Mt & Timpandage seem to be the 2 mountains which have produced life giving water to women & men ~~for~~ ^{for} ages of Utah Valley for many ages. What is Upper Falls, Bridal Veil & Lower Falls issuing out of the bowels of Cascade Mt.

For years, as a boy, I dreamed that there was a big lake near Cascade Peak that fed these falls, but in the late 1950s, Merrill Christensen flew me over that area & saw enough its waters flow out of the side of that mountain.

What more can be said about the history of Cascade Mt.?

Since pioneer Days, men have tried to harvest timber from its massive summits, have harvested its water and picked & eaten its edible berries.

The timber harvest has been meager due to its rugged, rocky ^{steep} crags. The harvesters tried cutting, then slide them down the mountain side, but splintered into tooth picks. Then they

Cancer Screening and Early Detection

Introduction

In 1990, an estimated one million people in the United States will be diagnosed as having cancer and 500 thousand will die of these diseases.¹ How many of these deaths could be avoided through early detection? Estimates vary from 3% to 35% depending on the criteria. Early detection via screening for breast and cervical cancer alone is projected to result in a 3% reduction in cancer deaths.² Adding early detection recommendations for these and other cancers to ordinary medical practice in physician's offices could reduce the number of cancer deaths by 1/3.³ In 1987, the National Cancer Institute, with consultation from professional medical organizations and from the American Cancer Society developed early cancer detection guidelines for cancers of skin, oral, breast, colon & rectum, cervix, prostate, and testis.

In developing these guidelines the following definitions were used:

Screening is looking for disease in asymptomatic populations.

Early detection is looking for disease in asymptomatic and symptomatic patients (case-finding) in the physicians office.

Detection examinations, tests or procedures used in early detection or screening are usually not diagnostic, but suspicious for the presence of disease.

Diagnosis is made following a work-up, a biopsy or other tests in pursuing symptoms or positive detection procedures.

The NCI Guidelines for Early Cancer Detection refer to individual case-finding in the physician's office. The purpose of this chapter is to present the NCI Guidelines, their rationale and supporting evidences.

Guideline Development

In developing the Guidelines, NCI called upon the major professional medical organizations in the U.S. for assistance. The organizations responded by sending consultants knowledgeable in the detection of cancer. They were from the following organizations:

- American Academy of Dermatology
- American Academy of Family Practice
- American Academy of Otolaryngology Surgery
- American Cancer Society
- American College of Obstetricians and Gynecologists
- American College of Physicians
- American College of Radiology
- American College of Surgeons
- American Gastroenterology Association
- American Medical Association
- American Society of Clinical Oncology
- American Society of Colon and Rectal Surgeons
- American Society of Internal Medicine
- American Urological Association
- Society of Surgical Oncology

The guidelines are based on the best statistical and clinical information currently available. Evidence of a mortality reduction from a randomized trial is present only for breast cancer. All experimental data as well as other scientific evidence, such as incidence, stage of disease, treatment, survival and mortality statistics are considered.

The term "Guideline" is used rather than "recommendation", because a physician considering a particular patient's background, medical history, and circumstances, may properly choose to make a different recommendation. They are considered "working guidelines" being subject to modification as new evidence becomes available.

These guidelines are intended to promote greater uniformity and compliance in cancer detection practices within the medical profession. Moreover, the guidelines should encourage patients to be responsible for their own health, to the extent prac-

(2) Bridal Veil

~~And~~ rigged a cable & tried to lower them down by this mean. That turned out to be damaging to these logs as well. So the timber harvest ~~it~~ was finally abandoned. The names of these enterprising men have escaped my search so far. If any of you know this history please call or write me.

Recreation at Bridal Veil took on new meaning - the vision of the son - Clegg. Rue had been in partnership - his brother in the M & R root beer stand in Heber City on the NW corner of Center & Main Street in Heber. Folks would come & have confections & dance at a small pavilion to the east of the "stand" which stood there, ~~so~~ snuggled up, on the south of "Heber Exchange Bldg."

After the demise of that enterprise, the dance hall was torn & the small white Root Beer Stand was used as Lyman Duke's Barber shop. Then Harold H. Smith tore it down & made a south entrance to an expanded new ^{Rocky White} grocery store department for Heber Exchange.
